                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mitogen activated protein-kinase inhibitor in admixture with a carrier. CC The method involves activation of a biological pathway producing an CC indicator of the processing of amyloid-beta precursor protein e.g. a CC phosphorylated substrate of a kinase comprising AEG09266-AEG09268. The CC indicator induces the expression of a reporter e.g. alkaline phosphatase, CC GFP, eGFP, dGFP, luciferase or beta-galactosidase in the mammalian cell. CC The pharmaceutical composition further comprises a label indicating use CC cognitive impairment or a susceptibility to the condition. The agent is CC cognitive impairment or a susceptibility to the condition for cessing or preventing a condition from or comprise of amyloid-beta precursor protein in a subject suffering from or compressing or preventing a condition involving cognitive impairment or a susceptibility to the condition, preferably, Alzheimer's disease. This sequence encodes thuman mitogen-activated protein kinase 10 (MAPKIO), transcript variant 4, a kinase involved in the up-regulation of amyloid-beta 1-42.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC c-Jun N-terminal kinase 3 (JNK3) expression or activity. The method CC comprises (a) incubating a cell that can express a JNK3 protein, or that CC has JNK3 activity, with a compound under conditions and for a time CC sufficient for the cell to express a JNK3 protein/activity without the compound; (b) incubating a control cell under the same conditions and for CC the same time without the compound; (c) measuring JNK3 expression/activity in the cell in the presence of the compound; (d) comparing the CC amount of JNK3 expression/activity in the presence and absence of the compound, where a difference in the level of expression/activity. The CC indicates that the compound modulates JNK3 expression/activity. The CC invention also provides a transgenic non-human mammal having a transgene CC disrupting expression of a JNK3 gene, the transgene being chromosomially CC e.g. antisense nucleic acids, are used to treat disorders involving CC excitotoxicity, e.g. Alzheimer's disease, Huntington disease, Parkindon's CC disease or epilepsy. JNK3 sequences under GenBank accession numbers CC U34819, U34820, U07620, L27128, L35236, X12740 and V00727 can be used in CC field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ij

                                                                                                                                                                                                                             The present invention relates to a method of identifying a candidate insulin receptor (INR) signaling modulating agent, involving contacting an assay system comprising an insulin receptor signaling modifier (ISM) polypeptide or nucleic acid with a test agent, and detecting a test agent -biased activity of the assay system. The method is useful for identifying candidate INR signaling modulating agents. ISM genes may be used as drug targets for treatment of disorders related to INR signaling such as diabetes or metabolic syndrome. ISM nucleic acids and polypeptides are useful for identifying and testing agents that modulate ISM function and for other applications related to the involvement of ISM in INR signaling, and for identifying subjects having a predisposition to such diseases associated with INR signaling. The present sequence is an ISM coding sequence described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying an insulin receptor signaling modulator, useful as drug targets for treating diabetes or metabolic disorders, comprises contacting an assay system comprising insulin receptor signaling modifiers with a test agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12-JAN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              discovery and development, toxicological and carcingenicity studies, forensics and pharmacogenomics. The microarray is also useful for monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The array can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia, immunopathies e.g. AIDS and asthma, neuropathies e.g. Alreimer's disease and Parkinson's disease. The present sequence represents a polynucleotide probe of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic forms at directly from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a combination which, comprises a number of polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the diagnosis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug

                                                                                                                                  밁
                                                                                                                                                                                                á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC comprising first polynucleotide probes comprising at least a portion of a gene encoding a receptor-like polypeptide, second polynucleotide probes CC comprising at least a portion of a gene encoding at least a portion of gene encoding at transducing CC polypeptide and third polynucleotide probes comprising at least a portion of a gene encoding an effector-like polypeptide. The probes of the CC composition are useful as array elements in a microarray for monitoring CC the expression of target polynucleotides. The microarray for monitoring CC diagnosis and treatment of cancer, an immunopathology or a neuropathology. It can also be used for drug discovery and development, CC microarrays can also be used for monitoring the progression of diseases that may be associated with the altered expression of signalling pathway CC polypeptides. The composition can also be used to purify a subpopulation CC is also useful for the diagnosis and treatment of cancer, e.g. cancers of the adrenal gland, bladder, bone marrow, brain, breast or cervix, CC unimmunopathology, e.g. Alzheimer's disease or depression. This sequence data for this patent did not form part of the printed specification but was contained in electronic format directly from USPTO at

The method of the invention has cytostatic applications and may be useful for identifying a subject at risk of breast cancer, for early diagnosis, prevention and treatment of breast cancer, possibly via gene therapy, as well as to analyse and predict a response to a breast cancer treatment and in clinical drug trials. The current sequence is that of the human MAP kinase MAPK10 (JNK3, JNK3A; p493F12;p54bSAPK MAP kinase;c-Jun kinase 3;JNK3 alpha protein kinase;c-Jun N-terminal kinase 3;Stress activated protein kinase beta) cDNA of the protein which has been manned to be protein kinase beta) cDNA of the protein which has been manned to be protein kinase beta) cDNA of the protein kinase beta concerns and the protein kinase beta) cDNA of the protein kinase beta) cDNA of the protein kinase beta) cDNA of the protein kinase beta concerns and the protein kinase beta) cDNA of the protein kinase beta) cDNA of the protein kinase beta beta protein kinase beta beta protein kinase beta protein kinase beta beta protein kinase beta protein kinase prot

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Schurt JH, Sc.
                                                                                                                                                                                                                                                                                                                                    The invention describes a method of identifying a candidate branching morphogenesis modulating (MBM) agent. The method comprises: providing an assay system comprising a MBM polypeptide or nucleic acid; contacting the assay system with a test agent under conditions where the system provides a reference activity, except for the presence of the test agent; and detecting a test agent blased activity of the assay system, where a difference between the test agent as a candidate branching morphogenesis modulating agent. Also described are: a method of modulating branching morphogenesis in a mammalian cell; and a method for diagnosing a disease in a patient. The method is useful in identifying a candidate branching morphogenesis modulating agent for preparing a composition for diagnosing or treating cancer. This sequence encodes a human branching morphogenesis
                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying a candidate branching morphogenesis modulating agent treating cancer comprises contacting the assay system comprising polypeptide or nucleic acid with a test agent and detecting a test

The method of the invention demonstrates cytostatic activity and may be useful for identifying a risk of, preventing and/or treating breast cancer and cancer metastasis. The methods may be utilized for gene therapy or RNA interference. The current sequence is that of the human mitogen-activated protein kinase 10 (MAPRIO) cDNA of the invention which is located at chromosome 4q22:1-q23.

This invention describes a novel method of identifying a compound that CC inhibits the processing of amyloid-beta precursor protein in a mammalian Cc cell. The invention also describes; a) an agent for inhibiting amyloid-beta precursor processing consisting of an antisense polynucleotide, a CC ribozyme or a small interfering RNA (sinNA), where the agent comprises a CC nucleic acid sequence complementary to, or engineered from, a naturally-occurring polynucleotide sequence encoding the polypeptide comprising the composition comprising the agent for inhibiting amyloid-beta precursor processing or an amyloid-beta precursor processing-inhibiting amount of a mitogen activated protein kinase inhibitor in admixture with a carrier. CC midicator of the processing of amyloid-beta precursor protein e.g. a cc indicator of the processing of amyloid-beta precursor protein e.g. a cc indicator induces the expression of a reporter e.g. alkaline phosphatase, CC GFP, eGFP, dGFP, luciferase or beta-galactosidase in the mammalian cell. CT he pharmaceutical composition further comprises a label indicating use of the composition for treating or preventing a condition. The agent is cuscipilible to the abnormal processing of the protein, or for treating or preventing a condition involving of amyloid-beta precursor protein in a subject suffering from or cusceptible to the abnormal processing of the protein, or for treating or preventing a condition preferably, Alzheimer's disease. This sequence encodes comparison the up-regulation of amyloid-beta involved in the up-regulation of amyloi

CC coroll type and to
The invention relates to novel human diagnostic and therapeutic CC polynucleotides designated dithp (ACC46080-ACC46749) and to their encoded CC proteins (DITHF; ABR41136-ABR41812). The invention also relates to CC polynucleotide sequences at least 90% identical to the dithp cDNA CC sequences of the invention; recombinant vectors, host cells and CC transgenic organisms comprising a dithp nucleic acid sequence; the CC recombinant production of DITHP proteins; antibodies specific for DITHP proteins; microarrays comprising dithp nucleic acid sequences; methods of CC detecting dithp nucleotide and protein sequences; methods of screening CC for compounds which specifically bind a DITHP protein; and methods of CC assessing the toxicity of test compounds using a dithp hybridisation CC probe. Dithp nucleic acid sequences and DITHP proteins may be used in the CC diagnosis of a wide variety of conditions including cancer and other cell proliferative disorders; autoimmune or inflammatory disorders; bacterial, CC viral, fungal or parasitic infections; hormonal disorders; metabolic consorders; and connective tissue disorders. They may also be used to screen for modulators of protein activity or gene expression. DITHP CC groteins can additionally be used in analysts of the proteome of a tissue or cell type and to induce antibodies. The dithp nucleic acids are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel human diagnostic and therapeutic polypeptide useful for identifying test compound which specifically binds to a polypeptide encoded by human diagnostic and therapeutic polynucleotide, and to induce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Dufour GE, Hillman JL, Yu JY, Tuason O, Daughtery SC, Dam TC, Liu TF, Ngyen DA, Peralta CH, David MH, Lewis SA, Chen AJ, Flores V, Marwaha R, Lo A, Lan RY, Urash

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         멼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                    The invention relates to a new composition comprising ADI61633-ADI6170and their complements that are cDNAs differentially expressed in brain disorders. Also included are a high throughput method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids and a high throughput method for screening a library of molecules or compounds to identify a ligand that specifically binds a cDNA. The expression of the each of the cDNAs is downregulated at least two-fold in the brain of the subjects with Alzheimer's disease (ADI61727) or upregulated at least two fold in Alzheimer's disease (ADI61728-ADI61770). The composition is useful for diagnosing or treating Alzheimer's disease. The present sequence is a cDNA downregulated at least rwo-fold in the brain of the subjects with Alzheimer's disease.
                                                                                                                                                                                                                                                                          New composition comprising cDNAs that are differentially expressed brain disorders, useful for diagnosing or treating Alzheimer's dis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mentioned above, as a source of antisense sequences, as a source of probes and primers, in genotyping and identification of individuals, in the generation of transgenic animal models of human disease or knock in humanised animals, in toxicological testing, and in transcript imaging. The present sequence represents a dithp cDNA encoding a DITHP protein which has intracellular signalling activity. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                       Claim 1; SEQ ID NO 33; 223pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
The invention relates to a composition (I) for the diagnosis, stagifig, treatment or for the monitoring of treatment of a subject with a brain consorder. (I) comprises several cDNAs that are differentially expressed in brain disorders and chosen from any one of 138 nucleotide sequences of AEA43798-AEA43935, or their complements. Also described: (I) a high throughput method for detecting differential expression of one or more CC cDNAs in a sample containing nucleic acids; (2) an isolated cDNA (II) cells of the about cell (IV), and (AEA43812, AEA43813, AEA43831, AEA43831, AEA43831, AEA43831, AEA43831, AEA43831, AEA43831, AEA438356, AEA43833 and AEA43923; (3) an expression vector (III) containing (II); (C) and (G) a pharmaceutical composition comprising (V). (I) is useful for a high throughput method of screening a library of molecules or compounds to identify a ligand which specifically binds a cDNA, where the method involves combining allow specific binding and detecting specific binding containing (IV) under conditions for the expression of the protein and recovering the protein from the coulture. (V) is useful for producing a protein, which involves culturing (IV) under conditions for the expression of the protein and recovering the protein from the coulture. (V) is useful for binding and detecting allows for the expression of the protein and recovering the protein from the coulture. (V) is useful for of molecules or compounds to identify a ligand which specifically binds (V), where the method involves combining (V) or its portion with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

(V) is useful for purifying a ligand from a sample, which involves combining (V) or its portion with the sample under conditions to allow specific binding, recovering the bound protein and separating the protein from ligand. (V) is also useful for producing an antibody, which involves immunizing an animal with (V) or its portion under conditions to elicit an antibody response, isolating animal antibodies and screening the isolated antibodies with the protein. (II) is useful in gene therapy for the treatment or prevention of conditions and disorders associated with immune response. The present sequence represents a human cDNA sequence which is differentially expressed in brain tissues, which is useful in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                    Polynucleotide for rapid isolation of candidate eukaryotic cell clones comprises a promoter, a test gene, an IRES sequence and a surface marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IRES; internal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    689
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0
```

The invention relates to a polynucleotide (I) comprising: (a) a regulatable promoter; (b) a test gene; (c) an IRES sequence; and (d) a surface marker coding sequence comprising a secretion signal sequence, a detectable label protein and a membrane protein where expression of the test gene also results in expression of the surface marker. A method is provided for identifying a host cell that exhibits regulated expression of a test gene complex that comprises (a) providing more than one host cell; (b) inducing the promoter; and (c) selecting a host cell that displays the surface marker on its surface. (I), the host cell and the method are useful for the rapid isolation of candidate eukaryotic cell

                                                                                                                                                        The invention relates to identifying pain-regulating substances (A) comprises (i) incubating a test substance with a cell (or preparation from it) that has synthesised a peptide or protein (B) and (ii) measuring either binding of the test substance to (B) or some functional parameter that is altered by this binding. The method is useful for identifying pain-regulating substances (A) with analyssic activity. (A) along with nucleic acid (ABL88411-ABL88441) that encode proteins (B, ABB85006-ABB85037) that interact with (A); (B); vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, particularly chronic pain, including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The present sequence is that of a polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                    and

                                                                                                                                                                                                                 The invention relates to identifying pain-regulating substances (A) comprises (i) incubating a test substance with a cell (or preparation from it) that has synthesised a peptide or protein (B) and (ii) measuring either binding of the test substance to (B) or some functional parameter that is altered by this binding. The method is useful for identifying pain-regulating substances (A) with analgesic activity. (A) along with nucleic acid (ABL88411-ABL88441) that encode proteins (B, ABB85006-ABB85037) that interact with (A); (B); vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, particularly chronic pain; including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The

                                                                                                                                                                                                                                  A CDNA clone (AAT10641) was obtd. that codes for rat proline-directed stress-activated protein kinase (SAPK) p54 beta-II (AAR89411). This cl and others (see AAT10638-40 and AAT10642) coding for p54 alpha-I, alpl II, beta-I and gamma (AAR89408-10 and AAR89412), were isolated from a brain cDNA library following PCR amplification using primers based on tryptic peptides obt. from a cycloheximide-treated rat
                                                                                                                                                                                                                                                                                                                                                                             DNA encoding recombinant P54 stress activated protein kinase related antibodies, useful for treating inflammation, hypoxia stress, and for drug screening.

This gDNA, and others (see AAT10638-41) coding for p54 alpha-I, alpha-II, beta-I and beta-II (AAR89408-11), were isolated from a rat brain gDNA library following PCR amplification using primers based on p54 tryptic peptides obt. from a cycloheximide-treated rat

The method is useful in drug development, particularly for conducting toxicity studies and analysis before a new drug or compound is approved for human consumption or use. The method is also useful in determining toxicological responses to a new drug. This polynucleotide sequence represents a phase-1 rat CT gene of the invention
Predicting the liver toxicity of an agent to an individual by using test expression profile with a set of reference expression profiles Predictive Model to determine whether the agent will reduce liver toxicity in the individual.

The present invention describes a method for predicting the liver toxicity in an individual to an agent. The method comprises: (a) obtaining a biological sample from the individual treated with the agent; (b) measuring the expression of one or more liver toxicity predictive genes in the sample; and (c) using the test expression profile with a set of reference expression profiles in a Predictive Model to determine whether the agent will induce liver toxicity in the individual. Also described: (1) predicting the liver toxicity of an agent using an in vitro system; (2) predicting the liver toxicity in a biological sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for predicting the liver toxicity of an agent to an individual comprising obtaining a biological sample from an individual treated with the agent, measuring the expression of case or more liver toxicity predictive genes in the sample and using the test expression profile with a set of reference expression profiles in a predictive model to determine whether the agent will reduce liver coxicity in the individual. The method of the invention may be useful for predicting the liver toxicity of an agent to an individual. The current sequence is that of the liver toxicity predictive DNA of the invention which represents a 24 hour combo All gene.
                                                                                                                                                                                                                                                                                                                                                                      Predicting the liver toxicity in an individual to an agent by
the expression of one or more liver toxicity predictive genes
sample from the individual treated with the agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09-MAY-2003; 2003WO-US014832

The method is useful for predicting the liver toxicity in an individual to an agent. The present sequence represents a liver toxicity predictive gene sequence that represents a 24 hour combo 3 gene, which is specifically

```

detecting the altered expression of genes in a toxic response of the spleen, where the cDNAs comprises 50-816 base pairs (ADR91045-ADR91348) or their complete complements. The invention further comprises: monitoring the treatment of compound toxicity in a sample; predicting the spleen toxicity in an individual to an agent; predicting the spleen toxicity of an agent using an in vitro system; a computer program product for predicting spleen toxicity from an expression profile of nucleic

responses species.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   bearing an encrypted training data set, encrypted lists of genes selected CC from the cDNAs, and a predictive model for causing a general purpose CC computer to predict the spleen toxicity of the sample based upon the CC training data set, the list of genes selected from the cDNAs, and the CC expression profile of nucleic acids from the sample; and an integrated CC system for predicting spleen toxicity, comprising means for measuring CC gene expression profiles of spleen predictive genes from samples exposed to the test agent and a computer system operably linked to the means that CC is capable of implementing a predictive model. The composition comprising CC cDNAs is useful for detecting altered expression of genes in a toxic cresponse of the spleen or for predicting toxic responses to one or more agents including lymphoid tissue types or other species. The predictive CC genes and models of the invention are useful for identifying and CC evaluating various in vitro systems that can be used to accurately predict in vivo toxicity. This polynucleotide sequence represents one of the genes predictive for spleen necrosis of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

The invention discloses a polynucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide CC of the polynucleotide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide CC expressible manner and an antisense polynucleotide. The binding CC expressible manner for synthesising the polynucleotide or as a probe CC is useful as a primer for synthesising the polynucleotide, or as a probe CC for detecting the polynucleotide. The polynucleotide CC for detecting the polynucleotide. The polynucleotide CC genes may be included in them, for developing a diagnostic marker or CC of gene therapy. The genes are involved in tissue and/or cell cC regeneration. Membrane proteins, signal transduction-related proteins, can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate CC the activity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence content is not represented in the printed specification, but

                                                                                                                                                                                                                                                                                                                                                            as colon cancer, renal cell carcinoma, prostate cancer, and non-small cell carcinoma, and non-malignant or immunological-related cell proliferative diseases, such as psoriasis, pemphigus vulgaris, Behcèt's syndrome, acute respiratory distress syndrome (ARDS), isothaemic heart disease, post-dialysis syndrome, leukaemia, rheumatoid arthritis, AIDS, vasculitis, septic shock, and other types of inflammation or lipid histiocytosis. The polypeptide of the invention may be useful in a screening method for identifying molecules which modulate its activity which are potentially useful as therapeutics. The present sequence represents a DNA sequence encoding the JNK2 protein used in the
                                                         AAQ85309
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel polynucleotide encoding a c-Jun N-terminal kinase that phosphorylates the c-Jun N-terminal activation domain. The polynucleotide sequence of the invention may have cytostatic, immunosuppressive, dermatological, antiinflammatory, cardiant, antitheumatic, antipsemic, antipsemic, antipseed in the vasotropic, antipacterial, antilipaemic activities. Also disclosed in the invention are modulators of the activity or expression of the c-Jun N-terminal antilipsemic activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide encoding a c-Jun N-terminal kinase (JNK), and the encoded polypeptide, useful for (identifying compounds for) treating cancer, psoriasis, rheumatoid arthritis, or septic shock.

                                                                                                                                                                                                                                                                                                                                                             JNK1 (See AAR70767) and JNK2 phosphorylate the c-Jun N-terminal activation domain which affect gene expression from Ap-1 sites. The 2 protein kinases allow the detection of the level of specific kinase activity associated with activation of c-Jun and Ap-1. Cell proliferative disorders associated with JNK can be treated by administering a therapeutically effective amount of a reagent which modulates JNK activity. Disorders such as leukaemia, cancers of prostate, lung (nonsmall cell) and colon. (Updated on 25-MAR-2003 to correct PN field.)

The invention relates to a method of treating an immunological disorder, con-malignant cell-proliferative disorder, leukaemia, an organ related malignancy or acute inflammation, associated with c-Jun N-terminal kinase (JNK), comprising administering to a subject, a compound which modulates the kinase activity. The method is useful for treating an immunological disorder, non-malignant cell-proliferative disorder, leukaemia, an organ related malignancy and acute inflammation. The disorder is associated with immunological disorder is an immunopathological disorder and is related to acute inflammation or septic shock, or the disorder and is related to acute inflammation or septic shock, or the disorder is acute respiratory distress syndrome (ARDS), AIDS or rheumatoid arthritis. The disorder associated with non-malignant cell-proliferative disorder is pooriasis, pemphigus vulgaris, ischaemic heart disease, leukaemia, post dialysis disorder and vascullitis. In organ related malignancy, the organ is the lymphoid system, breast, gastrointestinal system or genito-urinary tract. The present sequence represents cDNA encoding c-Jun N-terminal

                          which is useful for treating a cell proliferative disorder, where the effect is inhibition or stimulation of the kinase, and the composition in an immunosuppressing agent. The composition identified by the above method, is useful for treating a cell proliferative disorder e.g. cancer psoriasis, pemphigus vulgaris, Behcet's syndrome, acute respiratory distress syndrome (ARDS), ischaemic heart disease, leukaemia, rheumatoid arthritis, AIDS, vasculitis and septic shock. The present sequence represents the human c-Jun N-terminal kinase, JNK2, cDNA
                                                                                                                                           The invention relates to a method of identifying a composition useful treating a proliferative disorder, affecting a kinase having serine an threonine kinase activity and phosphorylating a c-Jun N-terminal activation domain. The method is useful for identifying a composition
                                                                                                                                                                                                                                                 Identifying a composition useful to treat a cell proliferative disorder, comprises incubating the composition and a serine/threonine kinase or polynucleotide encoding the kinase and measuring the effect of the composition on the kinase.
                                                                                                                                                                                                                     Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A novel method for modulating cell adhesion molecule expression involves antisense inhibition of a tumour necrosis factor (TNF) alpha signalling molecule. In the method TNF alpha signalling molecules Ha-ras, C-raf and C-Jun N-terminal kinase (JNK) 2 were inhibited by antisense oligonucleotides. In addition an antisense oligonucleotide to the cell adhesion molecule E-selectin was also examined. The present sequence is
                                                                                      contained modifications, namely phosphorothicate linkages and 2'methoxyethoxy bases. Some C residues also had a 5'methyl modification. Inhibitors of the TNF alpha signalling molecules have antibacterial, immunosuppressive, antipsoriatic, antidiabetic, antithyroid, cytostatic, dermatoological, antiallergic and antiinflammatory activity. The antisense inhibitors may be useful for the treatment of sepsis, rheumatoid arthritis, inflammatory, immune disease, inflammatory bowel disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antisense; E-selectin; TNF alpha; cell adhesion; human; tumour necrosis factor alpha; phosphorothicate; methoxyethoxy; sepsis; rheumatoid arthritis; inflammatory; immune disease; inflammatory bowel disease; allergic contact dermatitis; psoriasis; inflammatory bowel disease; allergic contact dermatitis; psoriasis; inmunosuppressive; antipsoriatic; antidabetic; antithyroid; cytostatidermatological; antiallergic; Ha-ras; c-raf; c-Jun N-terminal kinase;

/MCI CGAP Sub6 is a subtracted library derived from BW,
NCI CGAP Sub6 is a subtracted library derived from BW,
NCI CGAP Sub6 is a subtracted library derived from BW,
NCI CGAP Sub6 is a subtracted library derived from BW,
NCI CGAP Sub6 library had 7 million recombinants. A
Single-stranded DNA preparation of four normalized libraries:
NCI CGAP Sub6 library had 7 million recombinants. A
single-stranded DNA preparation of BW was used as a tracer
in a subtractive hybridization with a driver comprising:
the IMAGE pool (NCI CGAP Kid3 pool 1 LLAM 3334-3337,
1456008-1456775,1500552-1502855); NCI CGAP Kid5 pool 1
LLAM 338-3342,3722-3725,
1233912-1325831,1471368-1472903,1492104-1493255);
NCI CGAP Lus pool 1 LLAM 3575-3582,3851-3584 (IMAGE
CloneIDs 1414920-1417991, 1520904-1522439); NCI CGAP GC4
pool 1 LLAM 3164-3167,3716-3720,3733-3735 (IMAGE
CloneIDs 1257096-1258631,146904-1470993,
1475592-1476743); NCI CGAP Pr22 pool 1 LLAM 2457-2459,
1101192-1101959, 1217928-1220615); NCI CGAP Sef010 pool 1
LLAM 2644-2653, 2871-2872 (IMAGE CloneIDs 986789,
1101192-1101959, 1217928-1220615); NCI CGAP GC4
population), plus a pool of 3,840 arrayed clones from
NCI CGAP Sub1 (IMAGE CloneIDs 2708616-2712455) and
NCI CGAP Sub2 (IMAGE CloneIDs 2712456-2723591) (30% of
the driver population), plus a pool of 11,136 clones from
NCI CGAP Sub2 (IMAGE CloneIDs 2712456-2723591) (30% of
the driver population). Subtraction was performed as
previously described (Bonaldo, Lennon & Soares (1996):
Normalization and Subtraction: Two Approaches To
Facilitate Gene Discovery. Genome Research 6, 791-806.
                                                                                                                                                  TAG_TISSUE=lung

UI-E-CKI is a normalized CDNA library containing the
following tissue(s): Retina Foveal and Macular. The
library was constructed according to Bonaldo. Lennon and
Soares, Genome Research, 6:791-806, 1996. First strand
CDNA synthesis was primed with an oligo-dT primer
containing a Not I site. Double stranded cDNA was ligated
to an EcoR I adaptor, digested with Not I, and cloned
directionally into pT7T3-Pac vector. The oligonucleotide
used to prime the synthesis of first strand cDNA contains
a library tag sequence that is located between the Not I
site and the (dT)18 tail. The sequence tag for this
library is GTCC. This library was created for the program,
Gene Discovery in the Visual System, supported by National
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /clone="UI-E-CK1-agb-1-15-0-UI"

/ (note "Mector: DExpress-1; Site 1: NotI; Site 2: EcoRV;
RNA obtained from human embryonic stem cells Isolated from
the inner cell mass of blastocyst stage embryos and
differentiated to an early neural progenitor cell type.
Cell line id and NIH Registry designation is BGO1.
Possitive for Nestin and Musashi expression. Passage number
18. cDNA primed using oligo-dT primer:
5'-pGACTACTTCTACATCGCAGCGCGCCC(T)25-3' and cloned into
the EcoRV/NotI sites of pExpress-1. This primary library
is non-normalized (normalized primary library is
NIH MGC 259). It was constructed by Express Genomics
(Frederick, MD). Sequence ends have been trimmed to
exclude vector and regions below Phred quality 16. Note:
this is a Mammalian Gene Collection library."
